

Application Report Customer Profile

BP Chemicals

Customer: BP Chemicals
Product: PCS23 Mobile SmartWasher™
Sector: Petrochemicals
Contact: Neil Botham
Replaced: Safety Kleen Kerosene Sink

Increasing concerns over Health and Safety and the potential cost benefits that could be gained from using an alternative method of cleaning, led BP Chemicals to look into the Smartwasher™ at its Hull manufacturing base. One of BP's onsite maintenance providers, Hewdens Ltd, already has a Smartwasher™ in service which they have had for a number of years so the capability of the product could be easily demonstrated.

On the basis that the Smartwasher™ is already being used on site and having had the opportunity to experience it first hand, BP Chemicals were happy to place an order with immediate effect.

BP found the introduction of the Smartwasher™ helped them to achieve their Health and Safety objectives instantly. Easy to use, efficient, kind to the user and a cost effective option, Smartwasher™ fits the organisation's objectives well, and additionally supports the company's policy to reduce their Carbon Footprint.

BP Chemicals are now trialling items from Rozone's 'Sonica' range of bench top ultrasonic precision cleaners.

BP Chemicals serves its global customers from its manufacturing operations on three continents. Its businesses reach from best-in-class proprietary technology for acetlys – a critical building block for a wealth of consumer products, from adhesives to cosmetics – to aromatics, including those found in one out of every three polyester shirts and blouses worn today.

Bioremediation Overview

Bioremediation is the earth's natural 'recycling' technology – the processes have evolved over millions of years, and involve the steady breakdown of organic waste matter and its conversion into simple essential substances. The process is the work of many billions of naturally occurring Micro-organisms that use organic waste as their food and energy source.

Rozone's range of 'Bioremediating' technologies take these naturally occurring processes, and simply speed them up so that they are commercially useful. Our patented 'SmartWasher' system applies these principles to parts cleaning and allows users to clean 'naturally' and safely, rather than using the man-made alternative of petrochemical based solvents. Many of our other biological products work on a similar basis, allowing our range of 'Sustainable Solutions' to provide health, safety and environmental benefits to customers and users across the world.
