Dovercourt Ford Vehicle Services

Customer: Dovercourt Ford
Product: OT8
Sector: Automotive
Contact: Simon Beament

Changing legislation of the storage of oil in 2006 led many organisations to review their existing storage facilities but also led to reviews of contamination of sites and their potential clean-up.

Dovercourt Ford, following the introduction of the legislation, replaced bulk oil storage tanks but was also faced with the clean-up of areas which for years had been subject to oil contamination. They sought a solution that would offer a high environmentally friendly factor which would be safe for customers, staff and contractors.

The pollution was deeply ingrained and the solution had to be interceptor friendly and approved by the local water authority.

The solution was Oil Technics OT8 Biological Oil Stain Remover. OT8 is a natural biological cleaner that is suitable for use on all concrete, brick and blockwork and works by oxidising hydrocarbon liquid stains. OT8 continues to work long after it has been applied and with a biannual application will continue to keep the stained/polluted area free of pollution.

Dovercourt also requested Rozone assist them in finding a company who could undertake the pollution cleaning on-site. Rozone takes pride in being able to bring this kind of support to its clients and because of its market knowledge was able to recommend a company it knew regularly used Oil Technics OT8 Biological Oil Stain Remover.

Pollution Control undertook the work. Ted Bowen of Pollution Control has used Oil Technics OT8 Biological Oil Stain Remover for many years and works for organisations like Railtrack. Ted commented: "We trust the quality of product Rozone produces and we know it leads to a high quality finish time and time again."

Low Environmental Cleaning Chemicals

Reducing Volatile Organic Compound (VOC) Emissions, conducting Risk Assessments with regard to operator exposure, ensuring correct disposal of spent cleaning products as hazardous waste, the avoidance of water pollution, endocrine disruptors, carcinogens and other potential hazards - these are just some of the issues facing chemical users with regard to their specification and choice of cleaning products. Rozone's range of low environmental impact cleaning products have been specifically formulated as a complete package of "Sustainable Solutions" - solutions on two fronts, firstly that many of them are aqueous based, and secondly that they solve problems; Sustainable in 3 key ways - environmental, social, and of course, economic. By specifying a cleaning product from Rozone, you can rest assured that you are making your compliance requirements that little bit easier, but without compromise in other areas.
