Royal Mail Vehicle Services

Customer: Royal Mail Vehicle Services
Product: Sobo Power and OT8
Sector: Floor Cleaning
Contact: Lloyd Talbot

Rozone has been working closely with Royal Mail Vehicle Services for seven years, supplying aqueous based parts-cleaning machines to their vehicle Service workshops. The Royal Mail has invested in both Smartwasher and Brakewasher, both of which use non-hazardous, non-toxic biodegradable degreasing fluid.

In addition Royal Mail have adopted the use of Rozone's supplementary range of Cleaning Solutions and Pollution Control Products all of which allow them to adhere to the latest Health and Safety directives whilst being environmentally friendly. The latest product to be adopted is Rozone's alkaline degreasing fluid – Sobo Power. Sobo Power is a versatile cleaning fluid with the ability to remove heavy oil as well as being an excellent traffic film remover making it a great solution for cleaning vehicles as well.

At the Coventry base, they are now using Sobo Power in their floor cleaning scrubber drying machine and in their pressure washer to clean their vans and lorries.

Commenting on the use of Sobo Power, Nick Thornett of Royal Mail Vehicle Services says: "We've seen a definite improvement since we've changed to Sobo Power compared to what we used before; and you've got the added benefit that it is biodegradable and environmentally sound." – Something which the Royal Mail is heavily focused on.

For heavily oil stained and contaminated areas of the workshop, around waste oil drums and banded storage areas, Rozone recommended OT8 – a biological oil stain remover that rapidly digests oil stains from concrete and porous floors.

Another biodegradable product, it is free of hazard labels and is an environmentally acceptable solution. Years of built up oily contamination will disappear after one application bringing concrete up like new, saving on re-flooring and preventing hazardous areas and walkways.

The Royal Mail is committed to reducing its impact on the environment and strives to comply with all relevant environmental legislation and take up products that achieve greater sustainability. Rozone's cleaning products tick all of these boxes.

Low Environmental Cleaning Chemicals

Reducing Volatile Organic Compound (VOC) Emissions, conducting Risk Assessments with regard to operator exposure, ensuring correct disposal of spent cleaning products as hazardous waste, the avoidance of water pollution, endocrine disruptors, carcinogens and other potential hazards - these are just some of the issues facing chemical users with regard to their specification and choice of cleaning products. Rozone's range of low environmental impact cleaning products have been specifically formulated as a complete package of "Sustainable Solutions" - solutions on two fronts, firstly that many of them are aqueous based, and secondly that they solve problems; Sustainable in 3 key ways - environmental, social, and of course, economic. By specifying a cleaning product from Rozone, you can rest assured that you are making your compliance requirements that little bit easier, but without compromise in other areas.
